PROFILE

AI engineer and founder building **production multi-agent intelligence systems**, agricultural AI, and open-source developer tools for African and global markets. Founder of **Busara AI** (7-stage parallel DAG pipeline with real statistical algorithms), **KilimoPRO** (offline-first crop-disease detection for 8 IGAD countries), and **AgentReplay** (deterministic replay for AI agents — 0.67% overhead, 100% reproduction fidelity). Five years shipping Go, TypeScript, Python, Flutter and ML systems that serve real users — real math, not LLM wrappers.

EXPERIENCE

Founder & Lead AI Engineer

2023 — PRESENT

Busara AI · busaraai.com · Nairobi / Remote

- Designed and shipped a **multi-agent platform** with a 7-stage parallel DAG pipeline (Ingest → Engineer → Detect → Forecast → Infer → Report) with circuit breakers and smart caching, serving live users.
- Implemented real statistics from scratch: Holt-Winters forecasting, Z-score/IQR/EWMA anomaly ensembles, OLS regression, Granger causality, K-Means++ clustering.
- Integrated GLM-4.6, GPT, Claude and Gemini into a multi-LLM council with streaming responses and citation-grounded RAG; cut average analysis latency ~40%.
- Stack: TypeScript, Next.js 15, React 19, PostgreSQL, Redis, Docker, Kubernetes, PWA.

Creator & Maintainer

2026 — PRESENT

AgentReplay (open source, MIT) · github.com/gadda00/agentreplay

- Shipped a **deterministic replay & counterfactual debugging layer** for AI agents — records every LLM call, tool response, clock read and RNG draw; replays bit-exact with **zero model calls**.
- Measured **0.67% recording overhead** (5% target; incumbents 0–15%), **100% reproduction fidelity**, 99 tests passing.
- First-class LangGraph integration; adapters for OpenAI SDK, Anthropic SDK, CrewAI, AutoGen; counterfactual mutation engine and CI regression runner.

Founder & Lead Engineer

2022 — PRESENT

KilimoPRO · kilimo.pro · Open source

- Built an **offline-first Flutter app** for African farmers with on-device crop disease detection (TensorFlow Lite) running on \$80 Android phones; aligned with Kenya's NASIP 2026–2030 strategy.
- Engineered GARCH/EWMA/VaR market price forecasting and a multi-LLM advisory council across agronomy, markets, climate and finance; integrated **22+ verified data sources** with SMS/USSD fallback.

EXPERIENCE · CONTINUED

AI Consultant & Founder

2022 — PRESENT

Independent · Nairobi · Remote worldwide

- Build multi-agent systems, RAG pipelines and LLM applications for fintech, agriculture, logistics and SMB clients — end-to-end from scoping audit to production deployment and team training.
- Engagements from SMB chatbots to \$50K+ enterprise multi-agent systems; founded Busara AI (2023) and KilimoPRO (2022).
- Built the **IntelliFlow** platform — a 33-agent TypeScript system with self-evolving trajectory-based learning that became the foundation of Busara AI.

Data Scientist & Analytics Engineer

2019 — 2022

Independent · Nairobi · Remote

- Delivered financial forecasting systems (ARIMA, Holt-Winters, backtesting) for retirement-benefits and fintech clients — **87.3% mean accuracy** across 12 financial metrics.
- Built a real-time Go fraud-detection microservice — weighted-vote ensemble of 7 statistical detectors scoring transactions in ~50–300µs at 50,000+ TPS.
- Shipped customer-segmentation engines (RFM, K-Means, GMM, DBSCAN) — 89% month-over-month stability, +23% campaign response rate.

SELECTED PROJECTS

Verxlite 2026	Universal AI workflow agent for sales & ops — FastAPI + Celery + Next.js, Google/HubSpot OAuth, Langfuse tracing.
IntelliFlow 2021 — now	33-agent self-evolving data-intelligence platform, 7-stage pipeline with trajectory-based learning. Turborepo, Next.js 15, TypeScript.
Fraud Detection System 2021 · v2.0	Real-time Go scoring engine — 7 statistical detectors, weighted ensemble, RBAC, Prometheus + OpenTelemetry, PCI-DSS / PSD2 / GDPR Art. 22. 84% recall at ~33µs.
Financial Forecasting Suite 2020	Holt-Winters, ARIMA/SARIMA, ensemble model selection. 87.3% mean accuracy (1-MAPE), 12–24 month horizons.

TECHNICAL SKILLS

Languages	Python, Go, TypeScript/JavaScript, Dart, SQL, Bash	LLMs	GPT, Claude, Gemini, GLM-4.6, Kimi K2, Mistral, Qwen, DeepSeek, Llama
Agents & RAG	LangChain, LangGraph, LlamaIndex, CrewAI, AutoGen, pgvector, Pinecone, hybrid search, reranking	ML & statistics	TensorFlow / TFLite, scikit-learn, Holt-Winters, GARCH/VaR, K-Means++, Granger causality
Web & mobile	Next.js, React, Node.js, FastAPI, Gin, Flutter, Celery	Data & infra	PostgreSQL, Redis, Kafka, Docker, Kubernetes, GCP, Prometheus, OpenTelemetry, CI/CD

EDUCATION

B.Sc. Computer Science

University of Embu · Embu, Kenya · 2014 — 2018

Top-quartile standing, School of Computing. Final-year project seeded KilimoPRO.
